

HOW TO PLAY

PHARMA+DASH

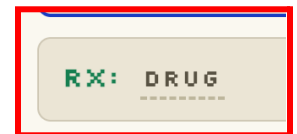

1. New admissions will appear as a yellow '?' at the nurses station, press the interact key, **[SPACE]**, to see what room they're in.

2. Collect the patients chart from outside their room using **[SPACE]**.

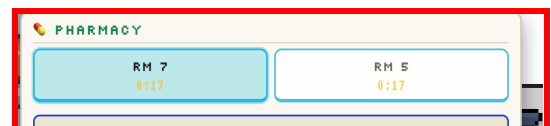

You can hold up to 3 charts at once, indicated by the meter above the doctors head (or on the right side info panel)

3. Take the charts to the pharmacy, and press **[SPACE]** to begin writing the appropriate prescription. Click on each component of the *RX* line to fill it in!

Switch between held charts by clicking the corresponding room number at the top.

4. Take the completed prescription to the patient and press **[SPACE]** to prescribe.

Correct answers will flash *green* and give you points.
Wrong answers will flash *red* and cost you a life!

Well done, you've treated your first patient!

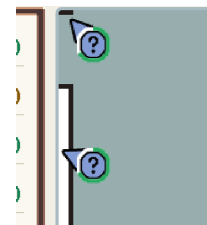

Additional Notes:

- Emergencies () are treated at the patients bed, just press **[SPACE]**. No charts and no pharmacy needed.

- Each patient has a timer that begins the moment they appear at the nurses station, treat them quickly or lose a life! The timer can be seen as a *coloured ring* ticking down around the alerts that appear.

- Don't worry if you get lost, alerts above each patient stick to the edge of the screen, pointing you in their general direction!

Running out of time or giving an *incorrect prescription* costs you a life, lose all three and the game ends... good luck!
